Brain computer interface Wikipedia
A brain computer interface (BCI), sometimes called a neural-control interface (NCI), mind-machine interface (MMI), direct neural interface (DNI), or brain machine interface (BMI), is a direct communication pathway between an enhanced or wired brain and an external device. BCI differs from neuromodulation in that it allows for bidirectional information flow.

Survival Brain Rules
BRAIN RULE RUNDOWN. Rule #2: The human brain evolved, too. The brain is a survival organ. It is designed to solve problems related to surviving in an unstable outdoor environment and to do so in nearly constant motion (to keep you alive long enough to pass your genes on).

Brain Wikipedia
The brain is an organ that serves as the center of the nervous system in all vertebrate and most invertebrate animals. The brain is located in the head, usually close to the sensory organs for senses such as vision.The brain is the most complex organ in a vertebrate's body. In a human, the cerebral cortex contains approximately 14 16 billion neurons, and the estimated number of neurons in

Neuralink and the Brain's Magical Future Wait But Why
The What the Hell is it Actually Called Blue Box. The cerebrum is the whole big top/outside part of the brain but it also technically includes some of the internal parts too.. Cortex means bark in Latin and is the word used for the outer layer of many organs, not just the brain.The outside of the cerebellum is the cerebellar cortex. And the outside of the cerebrum is the cerebral cortex.
