**System administrator Wikipedia**
A system administrator, or sysadmin, is a person who is responsible for the upkeep, configuration, and reliable operation of computer systems; especially multi-user computers, such as servers.The system administrator seeks to ensure that the uptime, performance, resources, and security of the computers they manage meet the needs of the users, without exceeding a set budget when doing so.

**What is root definition by The Linux Information**

root is the user name or account that by default has access to all commands and files on a Linux or other Unix-

like operating system.It is also referred to as the root account, root user and the superuser.. The word root also has several additional, related meanings when used as part of other terms, and thus it can be a source of confusion to people new to Unix-like systems.
