Action algebra Wikipedia
In algebraic logic, an action algebra is an algebraic structure which is both a residuated semilattice and a Kleene algebra. It adds the star or reflexive transitive closure operation of the latter to the former, while adding the left and right residuation or implication operations of the former to the latter.

Hidden Algebra Home Computer Science and Engineering
The hidden algebra approach takes as basic the notion of observational abstraction, or more precisely, behavioral satisfaction: this means that hidden specifications characterize how objects (and systems) behave in response to a given set of experiments, rather than how they are implemented; this provides a version of what is called a behavioral type in the object oriented jargon, but which we prefer to call a hidden theory, behavioral theory, or hidden specification.
