Identity management Wikipedia
Definitions. Identity management (IdM) is the task of controlling information about users on computers. Such information includes information that authenticates the identity of a user, and information that describes information and actions they are authorized to access and/or perform. It also includes the management of descriptive information about the user and how and by whom that information

Identity management system Wikipedia
In general, electronic IdM can be said to cover the management of any form of digital identities. The focus on identity management goes back to the development of directories, such as X.500, where a namespace serves to hold named objects that represent real-life "identified" entities, such as countries, organizations, applications, subscribers or devices.

Enable federated authentication and configure Auth0 as an
Sitecore 9.0 has shipped and one of the new features of this new release is the addition of a federated authentication module. I wrote a module for Sitecore 8.2 in the past (How to add support for Federated Authentication and claims using OWIN), which only added federated authentication options for visitors.Backend functionality was a lot harder to integrate, but I am glad that Sitecore took

How to Use SAML to Automatically Direct Federated Users to
Identity federation enables your enterprise users (such as Active Directory users) to access the AWS Management Console via single sign-on (SSO) by using their existing credentials. In Security Assertion Markup Language (SAML) 2.0, RelayState is an optional parameter that identifies a specified destination URL your users will access after signing in with SSO.
