Amazon Cognito Identity Pools Federated Identities
Amazon Cognito identity pools (federated identities) enable you to create unique identities for your users and federate them with identity providers. With an identity pool, you can obtain temporary, limited-privilege AWS credentials to access other AWS services. Amazon Cognito identity pools support the following identity providers:

Enable federated authentication and configure Auth0 as an
Sitecore 9.0 has shipped and one of the new features of this new release is the addition of a federated authentication module. I wrote a module for Sitecore 8.2 in the past (How to add support for Federated Authentication and claims using OWIN), which only added federated authentication options for visitors.Backend functionality was a lot harder to integrate, but I am glad that Sitecore took

Identity management Wikipedia

Definitions. Identity management (IdM) is the task of controlling information about users on computers. Such information includes information that authenticates the identity of a user, and information that describes information and actions they are authorized to access and/or perform. It also includes the management of descriptive information about the user and how and by whom that information

How to Easily Identify Your Federated Users by Using AWS

Starting today, you can use AWS CloudTrail to track the activity of your federated users (web identity federation and Security Assertion Markup Language [SAML]). For example, you can now use CloudTrail to identify a SAML federated user who terminated an Amazon EC2 instance in your AWS account, or to identify a mobile application user who [ ]
